

HaiReconstruct

Step by step

1 Wash hair with SOS Pre-treatment Shampoo (for damaged hair, there's no need to repeat the process)

2 Dry hair 50% (for very damaged hair, only towel dry)

3 Apply the product (you can spray it into hair or apply *it with a tint brush*)

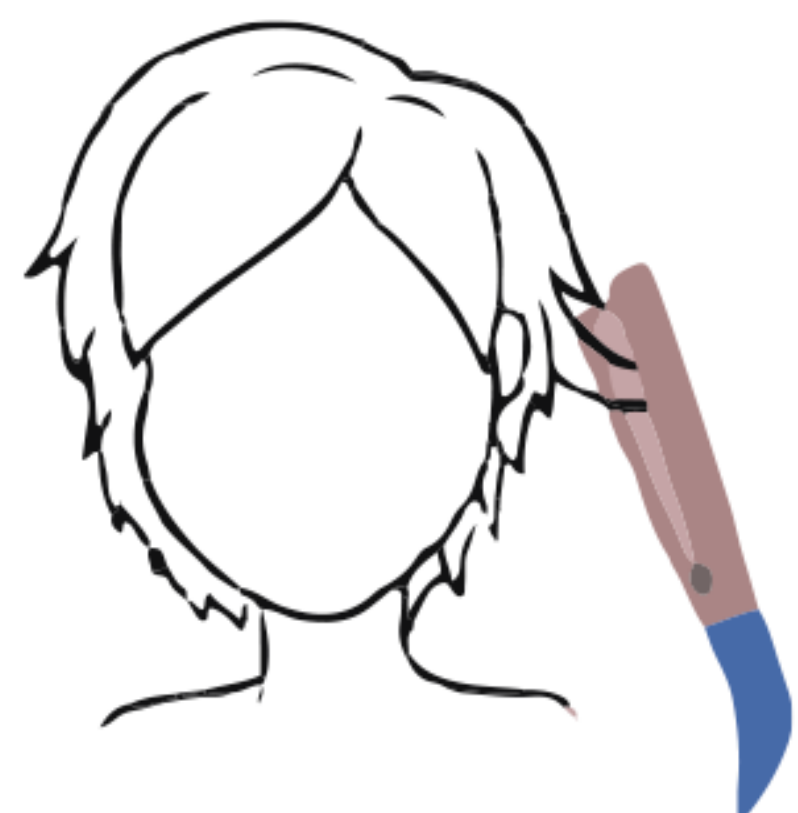

No need to apply an excessive amount of product, as the formula is very hydrating, and it can make hair greasy

4 Massage thoroughly each section

5 Blow-dry hair 100% (there's no need to rinse it)

6 Iron each section 5 to 7 times. The table below indicates which temperature to choose according to the hair condition:

200 degrees

For thick, brittle, porous but resistant hair

180 degrees

For fine, thin, fragile and frizzy hair, also in case of blonde, bleached and highlighted hair

Hair dryer
(do not use the hair straightener)

When hair is elasticated, extremely damaged hair

The treatment is done, and the client can wash hair any time after that.
