

ANTI-AGEING

BOTOX EFFECT MASK

Step by Step

1 Wash hair with Pre-treatment Shampoo (DO NOT rub the scalp) , rinse hair thoroughly (repeat the application if necessary)

2 Using hair dryer, dry hair 30%

3 Divide hair into sections, and apply a small amount of the product. Massage thoroughly each section

4 Leave on hair for 30 minutes (heat can be used to intensify results), you can also use a plastic film to intensify results

5 Rinse hair. This part you can control, depending on the desired result:
The straighter you want the hair to be, the less you have to rinse it, meaning:

- If the desired result is only frizz and volume reduction, you can rinse like you do with a regular hair conditioner, leaving only a small amount of the product.

- If you wish to make hair straighter you can leave more product into the hair.

6 blow-dry hair 100%

7 Iron 4 to 7 times each section

210 to 230 degrees	Coarse, thick hair for frizz and volume reduction
200 degrees	Fine, thin, frizz but in a healthy state
180 degrees	For fine, thin, fragile and frizzy hair

The treatment is done, and the client can wash hair any time after that.

Results will last from 6 to 8 weeks and this treatment can be done between keratin treatments or for clients that don't want straight hair but want it more manageable.
